## Solar experiments/ Solar toys 6 in 1

This construction kit includes an encapsulated solar cell and an electric motor. With these basic elements 6 solar models can be build: Solar car, solar rotor, solar wind power station, solar boat, solar dog, and solar sleigh.

The models can be disassembled after playing/ experimenting.

Natural sunlight serves as an ideal light source, inside a room a halogen lamp would be suited best. LED lamps or LED flashlights are not applicable because of the altered light spectrum.
